BARCODEYES BLASTER 2R

2D Barcode Scanner
User's Manual

V3.6

Table of Contents

1 Factory Defaults

Factory Defaults：The communication mode will be restored to HID-KBW. For other default values, please refer the "System Default Setting Table", "Barcode Default Setting Table" in the Appendix.

Restore All Factory Defaults
$>:S010186.<$

2 User Default Settings

The user can set the required configuration according to the use environment, and then scan Save Current Setting" to save the current configuration as the user default configuration. If the user default settings have been set before, this operation will replace the original user default settings information.
The initial user default configuration can be restored by scanning "Restore User Default Setting"

Save Current Setting
$>:SVDEF02.<$

Restore User Default Setting
$>:S020286.<$

3　Output Settings

3.1　USB Interface Settings

When using USB to connect the scanner and host, users can choose USB HID-KBW, USB virtual serial port or USB HID-POS according to actual needs.

3.1.1　USB HID

USB HID-KBW：

In keyboard mode, place the mouse cursor on the notepad, etc., and the data will be entered into the notepad after successful decoding.

USB HID POS：

Use HID POS protocol to communicate

USB HID-KBW
$>:S0F0116.<$
(Default)

USB HID POS
$>: S0F0516.<$

10

Upload Data Delay Setting

No Delay
$>:SC00037.<$
(Default)

Delay (20ms)
$>:SC04037.<$

Delay (40ms)
$>:SC0C037.<$

$>:R0001E2.<$
Delay setting
(Any interval)

The data delay is actually delayed according to the character, and the unit is 1ms (milliseconds).

For Example: Set the delay 10ms (data code is expressed in hexadecimal)

1) Scan code"Enter Setup"

2) Scan code "Delay setting"

3) Scan Data code "0" "A"（in Appendix）

4) Scan code "Save "（in Appendix）

5) Scan code "Exit Setup"

Exit setup

3.1.2 USB Virtual Com

USB Virtual Com：Enumerate into a virtual serial port. At this time, the PC needs to use the serial port assistant to receive data.

USB Virtual Com
$>: S0F0216.<$

3.2 Rs232 Interface Setting

Rs232 interface is a common way to connect scanner and host equipment (such as PC, POS and other equipment). When using the RS232 interface, the scanner and the host device must match the communication parameter configuration completely to ensure smooth communication and correct content.

Rs232
$>: S0F0016.<$

13

3.2.1 Baud rate

Baud rate is the number of bits of data transmitted per second. Set the baud rate to match the host requirements.

1200bps

$>:S0F0047.<$

2400bps

$>:S0F0147.<$

4800bps

$>:S0F0247.<$

9600bps

$>:S0F0347.<$

（Default）

14400bps

$>:S0F0447.<$

（Not support）

19200bps

$>:SF0200C.<$

BIG-5

$>:SF0300C.<$

SHIFT JIS

$>:SF0400C.<$

Chinese output quick settings

You can set Chinese output to TXT or WORD.

Chinese output to TXT

$>:SHTCT01.<$

Chinese output to WORD

$>:SHTCT02.<$

Disable Chinese output

$>:SHTCT03.<$

3.5   Invoice Scan Mode

The QR content format of different invoices is different. After enabling this function, the decoded result will be analyzed and reorganized according to certain rules. Only the national tax is supported.

National tax regulations: Start character $+version number 01+base64 (name</>taxpayer identification number</>address telephone</>account opening bank and account number</>CRC)+terminator $.

Disable
$>:S0F002A.<$
Default

National tax
$>:S01002A.<$

3.6 Invisible Character Output Control Settings

Disable/Enable invisible character output

Enable
$>:S070236.<$

Disable
$>:S070736.<$
（**Default**）

F1-F12 Function Key Settings

Function keys refer to F1-F12. To output "Enter", need to set "output function keys"

Output function key
$>:S070036.<$
（Default）

Output CTRL key combination
$>:S070136.<$

Example: Set the prefix "F8" (Hexadecimal value is 0x1D)

1) Scan code "Enter setup"

2) Scan code "Allow adding custom prefix"

3) Scan code "Set Custom Prefix"

4) Scan Data code: "1" "D" (in Appendix)

5) Scan code "Save" (in Appendix)

6) Scan code "Output CTRL key combination"

7) Scan code "Exit setup"

Exit setup

3.7   Keyboard Mode Settings

Keyboard input mode

Standard keyboard input mode
$>:S030037.<$

Virtual keyboard input mode ALT+NUM
$>:S030337.<$

Keyboard emulation input character mode
$>:S030237.<$
（**Not support**）

Keyboard simulation input control
Character Mode
$>:S030137.<$
（**Not support**）

Analog Numeric Keypad

Analog numeric keypad: Before sending the result of scan code , it will first judge whether num lock is turned on. If it is not turned on, then send a command to turn it on.

Analog numeric keypad
$>:S040437.<$

NO simulate the numeric keypad
$>:S040037.<$
Default

Caps Lock

No Case Conversion

$>:S380037.<$

Letter case interchange

$>:S380837.<$

Convert All to Upper Case

$>:S382037.<$

Convert All to Lower Case

$>:S383037.<$

ALT+ Num Special Settings

When outputting internal code, if use alt+Num model, the first number is 0, the received input method needs to set the corresponding national keyboard, otherwise it may be garbled; if the first digit does not add zero, the received system code needs to be consistent with the internal code output from the scanner, otherwise it may be garbled.
When the keyboard can not output standard ASCII characters, you can choose to use ALT+number instead of output.

Not output the leading 0
$>:S080036.<$

Output leading 0
$>:S080836.<$
（**Default**）

Keyless ASCII is not output
$>:S100036.<$
（**Default**）

ALT+Numbers instead of keyless ASCII
$>:S101036.<$

27

4　System Settings

4.1　Enter Setup and Exit Setup

Scanning the **"Enter Setup"** barcode can enable the scanner to enter the setup mode. Then you can scan a number of programming barcodes to configure your scanner.

To exit the setup mode, scan the **Exit Setup** barcode or a nonprogramming barcode, or reboot the scanner.

Enter setup	Exit setup
$>:S01010F.<$	$>:S01000F.<$
	（Default）

4.2   Scan Mode

4.2.1   Manual Mode

Press the button to trigger the reading, and release the button to end the reading. If the reading is successful or the reading time exceeds the single reading time, the reading will end.

*Manual mode(Command+Button)
$>: S03001A.<$
（Default）

4.2.2   Automatic Scanning Mode

In the induction mode, you can activate the scanner to work by pressing a button, sending a command, or auto-sensing.

Automatic Mode(Command+Button+Auto-sensing)
$>: S03011A.<$

4.2.3   Continuous Scanning Mode

Under continuous Scanning Mode，after a period of time when a reading is successful, it will automatically start the next reading. Start or end scanning until the button is pressed and released (buttons and commands can be terminated and reopened)

Continuous Mode (buttons + commands)
$>: S03021A.<$

Decode Session Timeout

Decode Session Timeout
$>: R000302.<$

Example: Set the reading interval time 500ms (Data code expressed in hexadecimal)

1) Scan code "**Enter setup**"

2) Scan code "Decode Session Timeout"

3) Scan Data code "1" （in Appendix）

4) Scan Data code "F" （in Appendix）

5) Scan Data code "4" （in Appendix）

6) Scan code "**Save**" (in Appdendix)

7) Scan code"**Exit setup**"

31

Single Scanning Time

Enabling the scanning till the it turned off automatically when the timeout is reached

Single reading timeout
$>: R000064.<$

Example: Set the single reading time 4000ms(The data code is expressed in hexadecimal)

1) Scan code "**Enter setup**"

2) Scan code "Single reading timeout"

3) Scan code "F" (in Appdendix)

4) Scan code "A" (in Appdendix)

5) Scan code "0" (in Appdendix)

6) Scan code "**Save**" (in Appdendix)

7) Scan code "**Exit setup**"

Timeout between Decodes (Same Barcode)

The same barcode reading interval can be controlled by setting the same barcode delay

Disable Timeout between Decodes
(Same Barcode)
$>:S100017.<$

Enable Timeout between Decodes
(Same Barcode)
$>:S101017.<$

Same code reading time setting
$>: R000322.<$

Sensitivity

This setting is for Sense Mode. The higher the sensitivity, the more sensitive the scanner is to the image. To avoid mistaken scanning, you can select an appropriate degree of sensitivity that fits the application environment.

Hyper Sensitivity
$>:S3F0034.<$
（Default）

High Sensitivity
$>:S3F0534.<$

Medium Sensitivity
$>:S3F1034.<$

Low Sensitivity
$>:S3F3034.<$

4.3 Sleep Settings

4.3.1 Enable/Disable Sleep

Sleep mode: Refers to the sleep mode when there is no operation for a period of time, and some resources will be shut down**.**

Disable automatic sleep
$>:S200017.<$
（Default）

Enable automatic sleep

$>:S202017.<$

4.3.2 Sleep Time Setting

Sleep time
$>:R000012.<$

Sleep duration refers to how long it goes to sleep after no action, or how long to wake up after going to sleep.

Example: Set the sleep time 1000ms (The data code is expressed in hexadecimal)

1) Scan code "**Enter setup**"

2) Scan code "Sleep time"

3) Scan Data code "3" (in Appdendix)

4) Scan Data code "E" (in Appdendix)

5) Scan Data code "8" (in Appdendix)

6) Scan code "**Save**" (in Appdendix)

7) Scan code "**Exit setup**"

4.4 Successful Reading Setting

4.4.1 Enable /Disable Beep

Enable prompt tone for successful reading (Setting code)
$>:S020229.<$
（Default）

Disable prompt tone for successful reading (Setting Code)$>:S020029.<$

Enable the prompt tone for successful reading (not setting code)
$>:S040429.<$
（Default）

Disable prompt tone for successful reading (not setting code)
$>:S040029.<$

4.4.2 Enable/Disable the Same Code Beep

Enable
$>:S010135.<$

Disable
$>:S010035.<$
（Default）

4.4.3　Beep Frequency

Low
$>:SFFDA27.<$

Medium
$>:SFF4B27.<$

Loud
$>:SFF2527.<$
（Default）

4.4.4　Prompt Tone Duration

40ms (Short)
$>:SFF1F28.<$

80ms(Middle)
$>:SFF3E28.<$
（Default）

120ms (Long)
$>:SFF5D28.<$

37

4.4.5   Read Tone Sound

Low
$>:S030018.<$

Medium
$>:S030118.<$

Loud
$>:S030218.<$

4.4.6   Enable/Disable the Reminder Light（LED）

Enable the LED
$>:S101029.<$
（Default）

Disable the LED
$>:S100029.<$

4.4.7   Enable /Disable Same Code LED

Enable
$>:S020235.<$

Disable
$>:S020035.<$
（Default）

4.5   Other Sound Settings

4.5.1 Enable/Disable Power tone

* Enable Power tone
$>:S010129.<$
（Default）

Disable Power tone
$>:S010029.<$

Buzzer prompt
$>:S202029.<$
（Default）

Enable unknown character sound
$>:S080829.<$

Disable unknown character beep
$>:S080029.<$

4.5.2   Mute Setting

Disable Mute
$>:S404000.<$

Enable Mute
$>:S400000.<$

Exit setup

4.6   Image Property Settings

In some application scenarios, the default image may not meet the decoding needs. At this time, you can turn on/off certain image properties (such as Image sharpening) to meet the decoding needs in special scenarios.

The basic steps of image attribute setting are as follows:

● Enable setting code

● Set on/off image properties

● Enable image extension settings

For example, Disable Image Sharpening, follow the setting steps as follows:

1) Scan code:Enter setup

2) Scan code: Disable Image sharpening

3) Scan code: Enable Image extension setting

4.6.1   Enable Image extension setting

$>:S010123.<$

Enable Image extension
setting

$>:S010023.<$

Disable Image extension
setting

Disable（Default）

4.6.2   Image sharpening

$>:S020223.<$

Enable Imagesharpening
（Default）

$>:S020023.<$

Disable Image
sharpening

41

4.6.3   Decode Timeout Setting

Decode timeout: Applied to control the decoder to exit the decoding of the current image with the set timeout time and proceed to the decoding of the next image when the decoding fails.

1D Decoding Timeout Setting

$>:S01010B.<$

Enable 1D code

timeout

（Default）

$>:S01000B.<$

Disable 1D code

timeout

1D DecodeTimeout Setting

$>:R001A04.<$

1D decode timeout time

2D DecodeTimeout Setting

$>:S02020B.<$

Enable 2D code

timeout

（Default）

$>:S02000B.<$

Disable 2D code

timeout

Exit setup

2D Decode Timeout Setting

$>:R001A44.<$

2D Decode timeout time

4.6.4 Vertical Scan

Function Description: When this setting is turned on, the decoding will increase the vertical scanning to improve the success rate of the decoding, but if the decoding fails, the decoding time will increase

$>:S010122.<$

Enable

$>:S010022.<$

Disable

（Default）

4.7　Lighting Settings

4.7.1 Illumination

Illumination action one: the environment when take the picture;action two: prompt of decoding completion

Off
$>:S0C0000.<$

Reading On(defualt)
$>:S0C0400.<$

Always On
$>:S0C0800.<$

4.7.2   Aiming

Off
$>:S300000.<$

Reading On(Lit when reading, Default)
$>:S301000.<$

Always On
$>:S302000.<$

4.7.3 Setting of Automatic Lights for Dark Environment

$>:S020021.<$

Enable

(Default)

$>:S020221.<$

Disable

When the dark light environment is enabled, the decoder detects the image according to the set [Detection Time], and judges whether it is in a dark environment according to the [Detection Threshold]. When the detected value is less than the set threshold. Then the decoder automatically turns on the light.

$>:R0019C2.<$

Dark light detection
time setting

$>:R0019E1.<$

Dark light detection threshold
setting

Dark light detection time and dark light detection threshold setting steps
1) Scan code [Enter setup]
2) Scan code [dark light detection time setting] or 【$>:R0019E1.<$】
3) Scan code [digital code]
4) Scan code [Save]
5) Scan code [Exit setup]

5　Data Editing

In daily applications, we need to edit the data before outputting it to facilitate data differentiation and processing.

Data editing includes: adding prefix, adding suffix, decoding information, adding terminator

The default output sequence of processed data is as follow:

  <prefix> <barcode data><suffix><terminator>

5.1　Prefix/Suffix Setting

Enable all prefixes and suffixes
$>:S80804E.<$
（Default）

Disable all prefixes and suffixes
$>:S80004E.<$

5.2　Prefix Sequence Setting

Customized prefix + Code ID + AIM ID
$>:S01014E.<$

Code ID + Custom prefix + AIM ID
$>:S01004E.<$
（Default）

5.3 Customized Prefix

Customized Prefix：The customized prefix adds a user-defined string before the decoded information. For example, it is allowed to add a customized prefix and set the prefix to the character string "AB". After reading the barcode with the data "123", the scanner adds the character string "AB" before the character string "123", and the host receives "AB123" ";

5.3.1 Enable/Disable Adding Customized Prefix

Enable add custom prefixes
$>:S04044E.<$

Disable add custom prefixes
$>:S04004E.<$
（Default）

5.3.2 Set Customized Prefix

Set custom prefix
$>: R000505.<$

Example: Set customized prefix to"**CODE**"（**The hexadecimal value is 0x43/0x4F/0x44/0x45**）

1) Scan code "**Enter setup**"

2) Scan code "**Set Custom Prefix**"

3) Scan Data Code："4""3""4""F""4""4""4""5"(in Appdendix)

4) Scan code "**Save** "(in Appdendix)

5) Scan code "**Enable add custom prefixes**"

6) Scan code "**Exit setup**"

5.4　Code Type Name Display

This function needs to set "Allow all types of prefixes and suffixes to be added". Add the code type name at the beginning of the scan code result. For example [QR].

Allow display code type name
$>:S808082.<$

Prohibit display code type name
$>:S800082.<$

5.5　AIM ID Prefix

AIM, known as the Automatic Identification Manufacturers, defines identification codes for various standard bar codes, which are defined in Appendix). The scanner can add this identification code before the barcode data after decoding, that is, the AIM ID prefix.

Allow add AIM ID
$>:S010182.<$

Prohibit add AIM ID
$>:S010082.<$
（Default）

$>:DEFXXC2.<$
All barcode Code ID Restore factory default value

5.6   CODE ID Prefix

Other than using AIM ID to identify different bar code types, users can also use the Code ID prefix to identify bar code types. Unlike the AIM ID prefix, the Code ID prefix corresponding to each barcode type can be customized. The Code ID of all barcodes consists of 1 or 2 characters, and it must be letters only, numbers, invisible characters, or punctuation marks, etc are not supported.

5.6.1 Allow/Prohibit Adding CODE ID Prefix

Allow to add CODE ID prefix
$>:S02024E.<$

Prohibit add CODE ID prefix
$>:S02004E.<$
（Default）

5.6.2 Setting CODE ID Prefix

Please refer to the following example for the method of modifying Code ID.

Example: Modify the Code ID of Code 128 to "p" (the hexadecimal value is 0x70)

1) Scan code "Enter setup"

2) Scan code "Set CODE128 CODE ID "

3) Scan Data code："7"(in Appdendix)

4) Scan Data code："0"(in Appdendix)

5) Scan code"**Save**"(in Appdendix)

6) Scan code "Allow to add CODE ID prefix"

7) Scan code "Exit setup"

5.7   Customized Suffix

Custom Suffix：The customized suffix is to add a user-defined string after decoding the information. For example, it is allowed to add a custom suffix and set the suffix to the character string "AB". After reading the barcode with the data as "123", the scanner adds the character string "AB" after the character string "123", and the host receives "123AB" ".

Note: The total length of the custom suffix string cannot exceed 5 characters**.**

5.7.1 Allow / prohibit adding custom suffix

Allow Custom Suffix
$>:S08084E.<$

Prohibit Custom Suffix
$>:S08004E.<$
（Default）

5.7.2 Setting Custom Suffix

Setting Custom Suffix
$>:R0005B5.<$

Example: Setting custom prefix is "CODE" (Hexadecimal value is

0x43/0x4F/0x44/0x45)

1) Scan code "Enter setup"

2) Scan code "Setting Custom Suffix"

3) Scan Data code："4""3""4""F""4""4""4""5" (in Appdendix)

4) Scan code "Save" (in Appdendix)

5) Scan code "Allow Custom Cuffix"

6) Scan code "Exit setup"

52

5.8 Suffix

The suffix (such as carriage return, line feed) marks the end of a complete data message. The suffix must be the last content when a piece of data is sent, and there will be no additional data after that.

Note: The total length of the terminator suffix string cannot exceed 5 characters.

5.8.1 Enable / Disable Suffix

Enable suffix
$>:S10104E.<$
（Default）

Disable suffix
$>:S10004E.<$

Scanning the following setting codes can you quickly set the terminator as 0x0D (carriage return) or 0x0D, 0x0A (carriage Linefeed) or 0x09 (Tab), and allow adding terminator to send.

Set suffix
$>:R000655.<$

Set suffix 0x0D
$>:DEFXXC3.<$
（Default）

Set suffix 0x0D,0x0A
$>:DEFXXC4.<$

Set suffix 0x09
$>:DEFXXC5.<$

Users can also customize the terminator suffix: First scan "Set suffix", then scan the hexadecimal value of the terminator suffix to be set in sequence, at last, scan "**Save**".

Note: The total length of the terminator suffix string cannot exceed 5 characters.

Example：Setting Custom suffix is 0x0A

1) Scan code "Enter setup"

2) Scan code "Set suffix"

3) Scan Data code："0""A"(in Appdendix)

4) Scan code "Save"(in Appdendix)

5) Scan code "Enable sufix "

6) Scan code "Exit setup"

5.9 Field Interception

Field interception refers to the secondary editing of the scanned code result. Assuming that the scan code result data contains a total length of K bytes, the first segment is M bytes and the latter segment is N bytes. The value range of M and N is 0-255.

Scan code result string, total length K Bytes

M   K-M-N   N
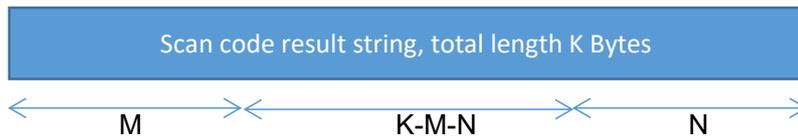

Interception method and effect

      Keep orign

      Reserve Front part M bytes setting

      Reserve Back part N bytes setting

      Reserve K-M-N bytes in the middle section

If you want to hide the front bytes, N is set to 0, keep the middle, that is, K-M-0

If you want to hide the back bytes, set M to 0 and keep the middle, ie K-0-N

Keep only the front part

$>:S180882.<$

Keep only the back part

$>:S181082.<$

（Default）

Keep only the middle section

$>:S181882.<$

Keep orign

$>:S180082.<$

（Default）

For the setting of the M bytes in the front part and the N bytes in the back part, the set length is 0-255, that is, 0x00-0xFF.

For example, to set the M bytes to 18, the corresponding ASCII hexadecimal value is 12, first scan the "Front part M bytes setting", then the date "1" and "2" respectively, and then scan code "save".

Front part M bytes setting

$>:R000831.<$

Back part N bytes setting

$>:R000841.<$

5.10 GS Character Conversion

GS character conversion refers to replacing the 0x1D contained in the content with the specified ASCII character.

5.10.1 Enable/ Disable GS character conversion

Enable GS characters conversion
$>:S010181.<$

Disable GS characters conversion
$>:S010081.<$
（Default）

5.10.2 Set GS Character conversion

Set GS Conversion

$>:R0006A6.<$

Example: Set the GS conversion to "####"（The hexadecimal value is 0x23/0x23/0x23/0x23）

1) Scan code"Enter setup"

2) Scan code "Set GS conversion "

3) Scan Data code："2""3""2""3""2""3""2""3"(in Appdendix)

4) Scan code "Save "(in Appdendix)

5) Scan code "Enable GS characters conversion"

6) Scan code "Exit setup"

5.10.3 Quick Setting Code for Special GS Conversion

Including four substitutions:"[GS]"、"(GS)"、"<GS>""'GS'"

$>:SHTCT04.<$

$>:SHTCT08.<$
'GS'

$>:SHTCT09.<$
`GS`

$>:SHTCT0A.<$
|

$>:SHTCT0B.<$
?

$>:SHTCT0C.<$
*

$>:SHTCT0D.<$
<0x1D>

5.11 Character Replacement

This function is to set an original replacement character and a replaced character. When the running character replacement is turned on, the character replacement is performed before outputting in the keyboard communication mode. If there is a set of transcoding, such as unicode to internal code or internal code to unicode, after the conversion, it is checked whether it is the character to be replaced, and if so, it is replaced with the character to be replaced.

Allow character substitution
$>:S020281.<$

Disable character substitution
$>:S020081.<$

When setting the original replacement character and the replaced character, it is 2 bytes, with the high order first, that is, xxxxyyyy, xxxx is the original replacement character, and yyyy is the replaced character.

For example, replace the space with a carriage return, that is, 0020000D, 0020 is a space, and 000D is a carriage return.

Refer to the GS character replacement character for the setting procedure.

Replacement character setting code

Character replacement data settings
$>:R0007D4.<$

5.12　Set NGR Information

After enable sending NGR information, when the decoding times out, the scanner will send user-defined NGR information to the host to determine the reading failure; users can set their own customized content by setting the NGR information. (NGR maximum of 7 characters!)

5.12.1 Enable/ Disable Send NGR

Enable Send NGR
$>:S40404E.<$

Disable Send NGR
$>:S40004E.<$
（Default）

5.12.2 Set NGR Information

Set NGR information
$>: R000767.<$

Example: Set NGR information to "FAIL" (hexadecimal value is 0x46/0x41/0x49/0x4C)

1) Scan code"Enter setup"

2) Scan code "Set NGR Information"

3) Scan Data code: "4" "6" "4" "1" "4" "9" "4" "C" (in Appendix)

4) Scan code "Save"(in Appendix))

5) Scan code "Enabel Send NGR

6) Scan code "Exit setup"

59

6   Barcode Parameter Settings

6.1   Overall Settings

6.1.1 Enable/Disable Reading All Barcodes

Set "Disable all barcode", the scanne cannot read other codes except the setting code

Enable all barcode
$>:S010187.<$

Disable all barcode
$>:S010087.<$

6.1.2 Enable/Disable Reading All 1D Barcodes

Enable all 1D Codes
$>:S020287.<$

Disable all 1D code
$>:S020087.<$

6.1.3 Enable/Disable Reading All 2D Barcodes

Enable all 2D codes
$>:S040487.<$

Disable all 2D codes
$>:S040087.<$

Note: CODE128 and QR barcodes mandatorily enabled, all setting codes cannot disable both of them.

6.1.4 Enable/Disable Reading All 1D/2D Reverse Barcodes

Enable all 1D reverse barcode
$>:S080887.<$

Disable all 1D reverse barcode
$>:S080087.<$
（Default）

Enable all 2D reverse barcode
$>:S101087.<$

Disable all 2D reverse barcode
$>:S100087.<$
（Default）

6.2 Code128/AIM128/EAN128/NL128

6.2.1 Enable/Disable

Enable
$>:S010188.<$
（Default）

Disable
$>:S010088.<$

6.2.2 CODE ID

Set CODE128 CODE ID
$>: R001342.<$

6.2.3 Length Settings

The user can set the maximum and minimum length of barcode reading. If the length of barcede being read does not match the set effective length, the barcode reading will be unsuccessful, and the scanner will not send the data to the host.

The barcode length is composed of "Minimum length" and "Maximum length". If the maximum length is less than the minimum length, only barcodes of these two lengths can be read. If the maximum length is equal to the minimum length, only barcode of this length is supported.

CODE 128 Maximum decoding length
$>: R000C21.<$

CODE 128 Minimum decoding length
$>: R000C31.<$

Example: Limited the scanner only read minimum 8 characters and maximum 12 characters

1) Scan code "Enter setup"

2) Scan code"CODE 128 Minimum decoding length"

3) Scan Data code "8"（in Appendix）

4) Scan code "Save " （in Appendix）

5) Scan code "CODE 128 Maximum decoding length"

6) Scan Data code "C"（in Appendix）

7) Scan code "Save "（in Appendix）

8) Scan code "Exit setup"

6.2.4 GS1-128 Output Enable

Enable output
$>:S202088.<$

Disable output
$>:S200088.<$
（Default）

6.3 UPC/EAN/ISSN/ISBN

6.3.1 Enable/Disable Scan

Enable
$>:S010189.<$
（Default）

Disable
$>:S010089.<$

6.3.2 CODE ID

Set EAN CODE ID
$>: R001362.<$

6.3.3 Parity Bits Transmission

EAN8 parity output
$>:S0101AA.<$
（Default）

EAN8 no parity output
$>:S0100AA.<$

EAN13 parity output
$>:S0202AA.<$
（Default）

EAN13no parity output
$>:S0200AA.<$

UPCA parity output
$>:S0404AA.<$
（Default）

UPCA no parity output
$>:S0400AA.<$

UPCE parity output
$>:S0808AA.<$
（Default）

UPCE no parity output
$>:S0800AA.<$

6.3.4 Set Whether to Enable Scan Additional Codes

After setting to "Read 2 digits additional code" or "Read 5 digits additional code", the scanner can read new barcodes composed of ordinary barcodes and additional codes, as well as ordinary barcodes without additional codes. After setting to "not read 2 digit additional code" or " not read 5 digit additional code", the part of the additional code in the new barcode composed of ordinary barcode and additional code will not be read, and the part of the common ordinary barcode can still be read. .

Read 2 digit additional code
$>:S101089.<$
（Default）

Not read 2 digit additional
code$>:S100089.<$

Read 5 digit additional code
$>:S080889.<$
（Default）

Not   read 2 digit additional code
$>:S080089.<$

6.3.5 Set Whether Additional Code is Required

This parameter is only valid when the scanner has been set "Read 2 digit additional code" or "read 5 digit additional code".

With additional code
$>:S808089.<$

No additional code required
$>: S800089.<$
（Default）

6.3.6 Extension Settings

"Barcode information not extended", means keep all original types and data bits;

"Barcode information 8 expand to 13", means expanding the Data Bits of the barcode (add 0 at the prefix), but the barcode type remains.

ENA8 to ENA13 OPEN
$>:S600089.<$

ENA8 to ENA13 CLOSE
$>:S602089.<$
（Default）

Enable
$>:S01018C.<$

Disable
$>:S01008C.<$
（Default）

6.4.2 CODE ID

Set CODABAR CODE ID
$>: R0013E2.<$

6.4.3 Parity

The check digit is not mandatory in the Codabar barcode data. If there is a check digit, it is the last character of the data. The check digit is a value calculated based on all data to check whether the data is correct.

Set to "None parity", the scanner will transmit all barcode data normally.

Set to "Check but not send check digit", the scanner will check according to the last 1 digit of the barcode. If the check is passed, normal data (the check digit excluded) will be transmitted. If the check fails, the barcode reading failure will be prompted.

Set to "Check and send check digit", the scanner will check the last 1 digit of the barcode. If the check is passed, the check digit will be transmitted as the last 1 digit of normal data. If the check fails, the reading failure will be promoted.

None parity
$>:S02008C.<$
（Default）

Check but not send check digit
$>:S06028C.<$

69

Check and send check digit
$>:S06068C.<$

6.4.4 Length Settings

The user can set the maximum and minimum length of barcode reading. If read barcode length does not match the set effective length, the barcode reading is unsuccessful, and the scanner will not send the barcode content to the host.

The barcode length is composed of "minimum length" and "maximum length". If the maximum length is less than the minimum length, only barcodes of these two lengths can be read. If the maximum length is equal to the minimum length, only barcode of this length is supported.

CODABAR Maximum decoding length
$>: R000C81.<$

CODABAR Minimum decoding length
$>: R000C91.<$

Example: Limit the scanner to only read barcodes with a minimum of 8 bytes and a maximum of 12 bytes

$>:S06069E.<$

6.12.4 Length Settings

The user can set the maximum and minimum length of barcode reading. If read barcode length does not match the set effective length, the barcode reading is unsuccessful, and the scanner will not send the barcode content to the host.

The barcode length is composed of "minimum length" and "maximum length". If the maximum length is less than the minimum length, only barcodes of these two lengths can be read. If the maximum length is equal to the minimum length, only barcode this length is supported.

NEC25 Maximum decoding length
$>: R000FE2.<$

NEC25 Minimum decoding length
$>: R001002.<$

Example: Limit the scanner to only read barcodes with a minimum of 8 bytes and a maximum of 12 bytes

1) Scan code "Enter setup"

2) Scan code "NEC25 Minimum decoding length"

3) Scan Data code "8"（in Appendix）

Disable
$>:S010092.<$
（Default）

6.13.2 CODE ID

Set STANDARD 25 CODE ID
$>: R0014A2.<$

6.13.3 Parity

Standard 25 barcode data is not mandatory to include a check digit. If there is a check digit, it is the last character of the data. The check digit is a value calculated based on all data to check whether the data is correct.

Set to "None parity", the scanner will transmit all barcode data normally.

Set to "Check but not send check digit", the scanner will check according to the last 1 digit of the barcode. If the check is passed, the normal data (check digit excluded) will be transmitted. If the check fails, the barcode reading failure will be prompted.

Set to "Check and send check digit", the scanner will check the last 1 digit of the barcode. If the check is passed, the check digit will be transmitted as the last 1 digit of normal data. If the check fails, the barcode reading failure will be prompted.

None parity
$>:S020092.<$
（Default）

Check but not send check digit
$>:S060292.<$

Check and send check digit

$>: R001772.<$

6.30.4   Length Settings

The user can set the maximum and minimum length of barcode reading. If the barcode length does not match the set effective length, the barcode reading is unsuccessful, and the scanner will not send the barcode content to the host.

The barcode length is composed of "minimum length" and "maximum length". If the maximum length is less than the minimum length, only barcodes of these two lengths can be read. If the maximum length is equal to the minimum length, only barcode of this length is supported.

HANXIN Maximum decoding length
$>: R000F22.<$

HANXIN Minimum decoding length
$>: R000F42.<$

Example: Restrict the scanner to only read barcodes with a minimum of 4 bytes and a maximum of 100 bytes

1) Scan code "Enter setup"

2) Scan code "HANXI Mnimum decoding length"

3) Scan Data code"4"(in Appdendix)

4) Scan code "Save"(in Appdendix)

5) Scan code "HANXIN Maximum decoding length"

6) Scan Data code："6" "4"(in Appdendix)

7) Scan code "Save "(in Appdendix)

8) Scan code "Exit setup"

6.31 DOTCODE

Enable

$>:S0101AE.<$

Disable

$>:S0100AE.<$

（Default）

6.32 OCR

Allow ID card reading

$>:S0101AC.<$

Prohibit ID card reading

$>:S0100AC.<$

（默认）

Allow passport reading

$>:S0202AC.<$

Prohibit passport reading

$>:S0200AC.<$

7 Batch Processing

When multiple settings are required on the scanner, it may be cumbersome to set one by one. At this time, we can save all the information that needs to be set as a barcode information, and the device can complete multiple settings after reading this barcode.

The following are the guidelines for batch processing:

1. The format of each command in the batch command is command + parameter.

2. The command ends with a semicolon. Note that there can be no spaces between each command.

3. Make the command into a QR code in the coding software.

4. The batch command starts with $>:BATCHST.<$ and ends with $>:BATCHET.<$

Note : The batch instruction cannot contain data code. Where data codes are needed, specify them by using command + parameters.

For example: Set [Set Custom Prefix] to [A], it will be expressed as follows in batch processing: $>:R000505.<$41;

classification	instruction	parameter	=CONCATENATE(B3,C3)	Necessity
Start instruction	$>:BATCHST.<$		$>:BATCHST.<$	Must indicate that the batch instruction starts
Open barcode	$>:S01010F.<$		$>:S01010F.<$;	
All types of prefixes and suffixes are allowed	$>:S80804E.<$		$>:S80804E.<$;	
Allow adding custom prefixes	$>:S04044E.<$		$>:S04044E.<$;	
Set custom prefix	$>:R000505.<$	41	$>:R000505.<$41;	
Close barcode	$>:S01000F.<$		$>:S01000F.<$;	
End of instruction	$>:BATCHET.<$		$>:BATCHET.<$;	Must indicate that the batch instruction ends

The synthetic instructions are as follows：

$>:BATCHST.<$ $>:S01010F.<$;$>:S80804E.<$;$>:S04044E.<$;$>:R000505.<$41; $>:S01000F.<$;**$>:BATCHET.<$;**

8 Appendix

8.1 System Default Setting Table

Parameter Name		Default setting	Remark
System settings			
Barcode function		Off	
Barcode information		Not send	
Scan mode		Single mode	
Single mode	Single read time	3000ms	
Continuous mode	Single read time	3000ms	
	Read interval time	1000ms	
Trigger mode		Default (Command +Key）	Commands and keys are always on
Sensitivity mode		High	
Sleep mode		Disabled	
Sleep time		5000ms	
Reading Success Tips		Enabled	
Reading success VF		Medium	
Reading success tips time		80ms	
Reading success LED		Enabled	
On beeper		Enabled	
Indicate month		Beeper	
Illumination		Read code on	
Aim light		Read code on	

Parameter Name	Default setting		Remark
Interface setting			
Interface	USB HID-KBW		
USB	Button delay time	Button not delay time	
	Country/keyboard language	U.S.A keyboard	
	HID Send Mode	Send Original data	
Rs232	Baud rate	9600	
	Parity Bit	None parity	
	Data Bits	8bits	

Parameter Name	Default setting	Remark
Data format setting		
Enable all Prefix and Suffix	ON	
Set Prefix steps	CODEID+Custom +AIMID	
Add custom prefix	Off	Up to prefix 10 characters
Add AIMID prefix	Off	]Cm
Add CODE ID prefix	Off	1or2 characters, uppercase or lowercase
Add Custom suffix	Off	Max suffix 5 characters
Add End suffix	On--0x0D	Enabled ，Enter
NGR Information	Not send	
Scan code customization	Non	
Invoice	Off	Only supports national invoice assistant
